

Arabikey

ArabiKey is a new website, centred around the Arabic language and featuring a free Arabic keyboard which emulates the Windows keyboard.

WHAT IS THE PURPOSE OF THIS ONLINE ARABIC KEYBOARD?

As an online Arabic teacher, the idea of creating an online Arabic keyboard came to me when I found my students were struggling with the digital homework I would give them, primarily because they didn't know how to type in Arabic on their computer. In fact, a lot of them didn't know how to add an Arabic keyboard to their system, and for those that did, not being able to see the letters they were typing represented a huge handicap.

So, I decided to create an online keyboard for computer users possessing keyboards without Arabic letters displayed.

Whether you want to write very long texts or simple Google searches, the adjustable writing box adapts to the length of your text. You can use the online Arabic keyboard to help teach your students how to type their own messages in the language. This keyboard is designed to make it easier to type in Arabic and puts all the numbers and symbols at your disposal.

The keyboard is intuitive and contains all the Arabic alphabet letters. In other words, all you have to do is type a letter on your physical keyboard so that the corresponding Arabic letter displayed on the virtual keyboard appears in the writing box. (On a tablet or a smartphone you can simply touch the screen.)

Additionally, each key has dual functionality, by simply holding Shift on your keyboard or clicking it with the mouse you enable diacritics / tashkīl and symbols.

I hope this will be of great use to you and your students. To report bugs or any kind of problems with the keyboard, don't hesitate to reach out to us on our contact page.
